

## Ten advantages of DENTSPLY Friadent quality implants

### 1. Made in Germany:

All implants are precision-manufactured in Germany and are known throughout the world by their outstanding quality.

### 2. Biocompatible pure titanium:

Implants by DENTSPLY Friadent are made of pure titanium. This material is perfectly compatible with the body and over time becomes completely integrated with the bone tissue.

### 3. Multiple tests of product quality:

During the manufacturing process the implants are inspected a number of times under extremely rigid certified quality standards. Discount suppliers cannot afford a comparable investment in quality assurance.

### 4. Clinically tested:

Decades of experience and clinical testing in scientific long-term studies ensure maximum safety.

### 5. Versatile:

The ANKYLOS, XiVE and FRIALIT implant systems are available in different diameters and lengths and with their comprehensive range of prosthetic abutment components provide the ideal solution for every situation.

### 6. Secure positioning:

DENTSPLY Friadent also offers your dentist the option of computer-guided implant placement. Implants can be positioned exactly right with the accurate three-dimensional planning and guided placement.

### 7. Fast integration:

The fine microscopically roughened implant surface included with all systems from DENTSPLY Friadent establishes the optimum conditions for safe and fast healing of the implant.

### 8. Customizable:

CAD/CAM abutments can be customized for the specific patient for your exact requirements and give you outstanding esthetic results.

### 9. Long-term availability of replacements:

A major implant manufacturer like DENTSPLY Friadent also offers replacement materials even after many years. Your implant abutments can be replaced at any time or adjusted to conform to a subsequent change in the prosthetic situation.

### 10. Available all over the world and internationally approved:

DENTSPLY Friadent has representatives in more than 60 countries and supplies dentists all over the world. You can have replacement parts placed quickly even during vacations and you have the security of knowing that they conform to all applicable laws and standards for medical devices.
