

## Lecture Abstract

### **Hans-Jürgen Joit MDT, Dusseldorf/DE**

Dental laboratory

#### **Main implantological topics:**

- All kinds of dental restorations with the main points on natural function and esthetics by using any techniques available

#### **Short ways- big action: Back to the roots**

MDT Hans-Jürgen Joit explains indications of different supplies for a variety of fixed and removable implant-supported restorations including biomechanical considerations and physical rules. From single crown to full-mouth restoration, from abutment to occlusion. Important issues of modern prosthetic design will be presented by reference to ambitious solved patient cases.

Health, esthetics and well being, today our teeth must fulfil the most complex expectations. Showing our individual personality and demonstrate vitality and a modern body awareness. Teeth are of essential importance for eating and speaking. Our teeth give the first impression every time we meet someone and get into a direct verbal contact. Solid and vital teeth convey a feeling of individual strength and self assertion. Shining, nicely shaped teeth have a sensual and attractive appearance. It is of utmost importance that our teeth are an integral part of the homogenous overall images of ourselves. Beautiful teeth are our personal business card. This is why I am highly motivated to create dentures fulfilling the requirement towards a holistic and consistent approach in my day to day business. Each piece of work is individual and unique as it matches with the static and dynamic needs of its environment. An intense conversation with the dentist and the patient enables our laboratory to develop individual dentures meeting the requirements of modern times and state of the art technology.
