

Lecture Abstract

Dr. Suvarna Nene/IN

Dental Surgeon & Implantologist

Main implantological topics:

- Full mouth rehabilitations
- Reconstructive surgical procedures

Professional skills:

- Augmentation surgeries of hard tissues
- Soft tissue surgical procedures

Predictable esthetics with immediate implant placement

Whilst placing implants in the anterior region immediately, one faces enormous challenges of various issues, such as gaining primary stability and how to manage discrepancies between sockets' size and shape and the implant design. However, the biggest challenge is to gain perfect esthetics in the definitive prosthesis.

There is a requirement of stable papilla and a gingival zenith that is equal in height to the contra lateral tooth while especially patients with high lip line and proclined teeth create additional challenges.

The lecture will discuss three approaches supported by clinical cases which will detail how an esthetically desirable symmetry can be achieved using ANKYLOS® implants.
