

Lecture Abstract

Assoc. Prof. Dr. Anders Örtorp, Göteborg/SE

Department Prosthetic Dentistry/Dental Materials Science, Institute of Odontology, The Sahlgrenska Academy, University of Gothenburg, Sweden

Main implantological topics:

- Clinical work: maxillofacial prosthodontics and implant prosthodontics
- Scientific work: supraconstructions on implants and long term follow-up studies

Professional skills:

- Specialist and a consultant in prosthodontics
- Since January 2008 an associate professor at the department of prosthetic dentistry/dental materials science, Institute of Odontology, Sahlgrenska Academy, Göteborg University

The development of CNC milled frameworks

The lecturer will demonstrate the development of CNC milled frameworks- mainly titanium frameworks. He shows different treatment stages and the future of milling technique. Accuracy, fit (and preload) of these superstructures will be demonstrated. Long-term prognosis and function of milled titanium frameworks will be considered.
