

Lecture Abstract

Assoc. Prof. Dr. Andreas Olze, Berlin/DE

University Berlin, Germany; Dentist

Main implantological topics:

- Bone augmentation
- Soft tissue management

XiVE® 3.0 in the esthetic zone

Since its introduction, the XiVE® plus implant with diameter 3.0 has been tried and trusted in clinical practice.

Particularly in cases of limited space, the rehabilitation with implant anchored dentures is only possible by using implants with reduced diameter.

The lecturer presents cases, in which the XiVE® 3.0 afforded convincing esthetic implant rehabilitation in the esthetic zone despite limited space.
