

Lecture Abstract

Dr. Imad Salloum, Tartous/SY

Oral and maxillofacial Surgeon, Implantologist

Professional skills:

- Bone augmentation
- Piezo intra lift technique

Implants in the anterior mandible ... How to play it safe!!!!

The anterior mandible was recommended as choice of site for implant placement, as it fulfils all prosthetic options for fixed or removable partial and full prosthesis. The lecturer describes in this presentation a life threatening sub-lingual artery injury caused by implant placement in the anterior mandible. It discusses case reports, literature review, etiology, radiology, anatomical and clinical assessments, prevention and how to manage all of this. The focus will be risk avoidance by using the XIVE® Security Kit, the benefits of XIVE® 3.0 and the advantages of modern technologies such as CB scan and guided surgery with the ExpertEase™ system.
